Division of Waste Management, NMSS

SUBJECT: SUMMARY OF THE MARCH 4, 2003, MEETING BETWEEN THE  
NUCLEAR REGULATORY COMMISSION STAFF AND YANKEE  
ATOMIC ELECTRIC COMPANY REGARDING THE YANKEE (ROWE)  
NUCLEAR POWER STATION LICENSE TERMINATION PLAN

On March 4, 2003, a public meeting was held at the NRC offices between staff from the Nuclear Regulatory Commission (NRC), and Yankee Atomic Electric Company (Yankee) to discuss Yankee's Historical Site Assessment and classification for the License Termination Plan (LTP) for the Yankee (Rowe) Nuclear Power Station.

The licensee presented a summary of the site history and an outline of the process for site classification, described the current approach for the historical site assessment including the use of past survey data, and provided an overview of the associated information to be included in the LTP. Some specific issues discussed are noted below.

The licensee will need to provide appropriate justification for having a class 1 area bordering a class 3 area without an intervening class 2 area. The licensee needs to consider the potential problems associated with a very large survey area. The licensee is proposing to install 8 additional wells to determine the extent of any groundwater contamination. However, the licensee will need to keep the NRC updated on groundwater sampling and should provide a detailed presentation on proposed sampling points to ensure that the staff has no significant issues prior to the wells being drilled. An additional meeting may be required to address this issue. Currently planned future meetings will address dose modeling, final status surveys, and LTP submittal mechanics.

The meeting attendance list and a copy of the slides used by the licensee for their presentation is attached. This meeting was noticed on January 24, 2003. No proprietary information was disseminated or presented at this meeting. No regulatory decisions were requested or made.
